

One Central Place PEEL STREET

Total Site Area: 892.5 sqm.
Site Coverage of Greenery: 308 sqm (> 20%)

The project is in the heart of Central which integrates the residential, public, and natural elements in a harmonious and sustainable way, offering a high quality of living for the residents and a vibrant and attractive destination for the public.

The landscape is conceived as a sophisticated urban retreat, anchored by a sequence of grand steps that establish a ceremonial approach from the street. These steps are framed by stepping-up planters lushly layered with vibrant, seasonally curated flowering plants, forming an elegant green ascent that elevates both movement and visual experience. The terraced planting softens the architectural mass while reinforcing a sense of prestige and arrival befitting a prime Central development.

As visitors ascend, the spatial experience unfolds into a generously scaled communal open landscape plaza, designed to create an oasis for residents' relaxation and everyday enjoyment, while remaining welcoming to the public. This elevated garden offers a calm and refined setting for respite, social interaction, and informal gatherings amid Central's dynamic commercial environment. The careful integration of structured hardscape, luxuriant planting, and open views results in a timeless, elegant landscape that enhances the development's premium identity and contributes positively to the surrounding urban realm.
