Self-test Fitness Corner

3-step Disinfection

Step 1:

Disinfect your hands.

Step 2:

Before the test, wipe the platform and handles of the Bioelectrical Impedance Analyser (BIA) with a tissue sprayed with disinfectant.

Step 3:

After the test, wipe the platform and handles of the BIA again with a tissue sprayed with disinfectant.

To avoid causing damage to the BIA, do not spray disinfectant directly onto its screen, handles or platform.
